## Does This Start Here Guide Apply to You?

Use the **Typical Setup method** described in this guide if all of these statements apply to you:

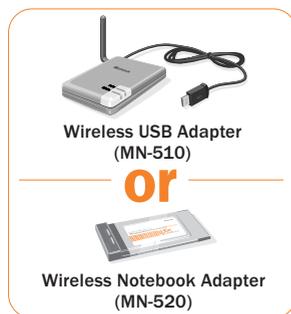

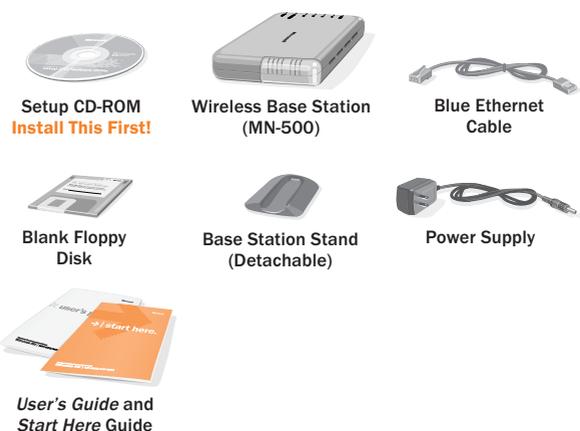

- You have one computer (first computer) that is connected to a broadband modem with an Ethernet cable and has an active Internet connection.
- You have a second computer that has an available USB port or PC Card (PCMCIA) slot.
- Your first computer is running Microsoft® Windows® 98, Windows 98 SE, Windows Me, or Windows XP.
- Neither computer is connected to any other computers or networks.

**IMPORTANT** Set up the base station before you set up the adapter.

See **Chapter 2 in the User's Guide** if any of these statements apply to you:

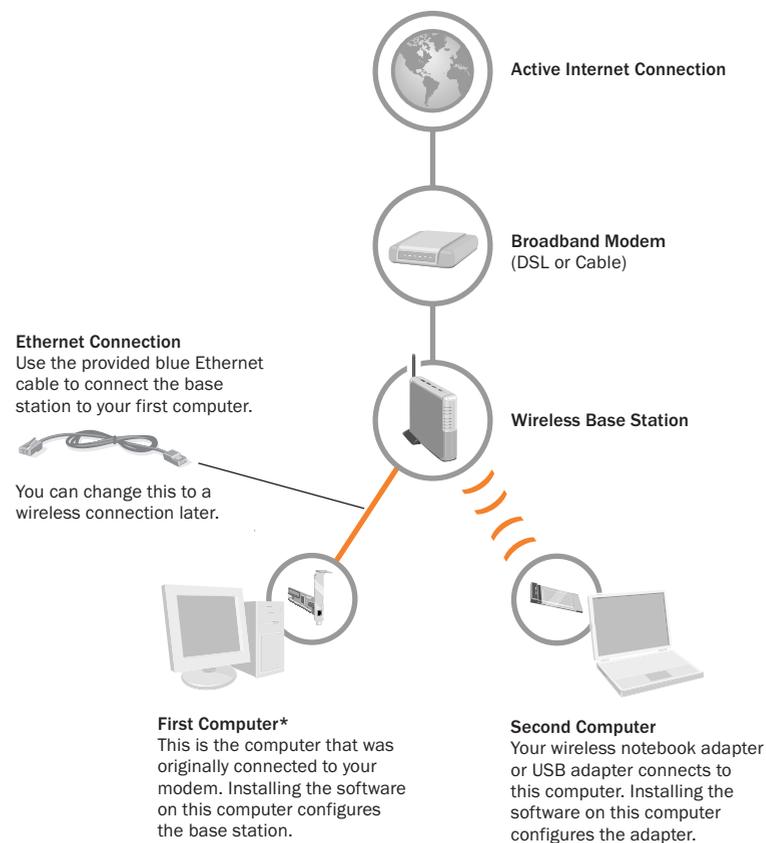

- Your computers are configured in any other way.
- Your first computer is running Microsoft Windows 2000.
- You have already connected the hardware and have not yet installed the software.

### Box Contents

After you set up your Broadband Networking Wireless Kit by using the Typical Setup method, your network will look like this:

**IMPORTANT** Install the software before you connect the hardware.

\* To connect the base station, the first computer requires an installed Ethernet adapter, as shown here.

# 1 | install.

## Setup Software | First Computer

**IMPORTANT** *If you have already connected the base station and have not yet installed the software, see “If You Connected the Hardware First” in Chapter 3 of the User’s Guide for setup instructions.*

**To install the software**, insert the Setup CD-ROM into the CD-ROM drive of the computer that is connected to your broadband modem. If the Setup Wizard does

not start automatically after a few seconds, open **My Computer**, double-click the CD-ROM icon, and then double-click **Setup** or **Setup.exe**.

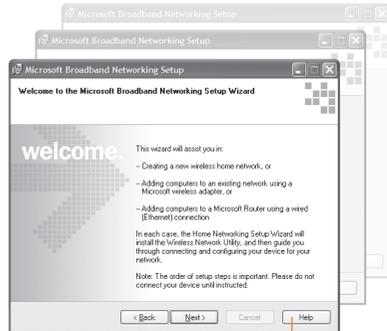

### In the Setup Wizard...

Follow the steps in the Setup Wizard to install the software and set up your base station.

When the wizard asks which device you are setting up, select the base station.

Continue following the instructions in the Setup Wizard. When the wizard asks you to connect the base station, proceed to the next page of this guide.

## Wireless Base Station | First Computer

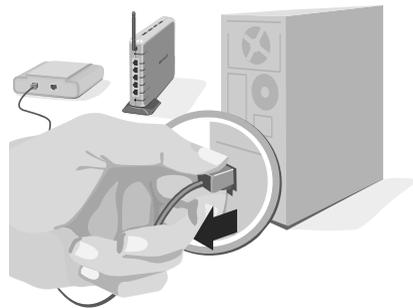

You do not need to turn off your computer to connect it to the base station. When the Setup Wizard asks you to connect your base station, do the following:

- 1 **Position the base station** close to your modem and computer, and near the center of your intended network area.

If you want to position the base station vertically, attach the optional stand.

- 2 **Unplug the modem Ethernet cable** from the back of your computer...

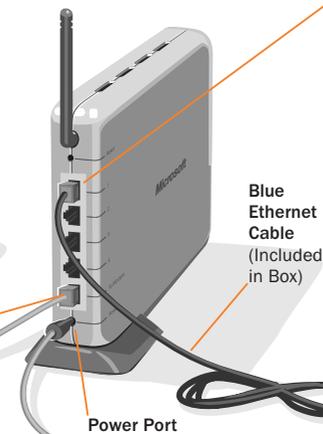

- 3 **...and plug it into the port labeled "To Modem"** on the back of the base station. The base station is now connected to your modem.

## Wireless Base Station

### ***In the Setup Wizard...***

Continue following the instructions in the Setup Wizard to configure your base station.

---

**TIP** Use the blank floppy disk included in the box to save your network settings. The wizard will ask you for the floppy disk in step 4.

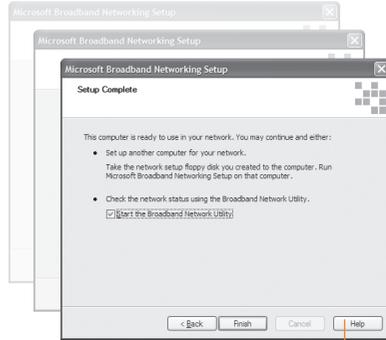

---

When you reach the end of the wizard, click **Finish**.

Remove the Setup CD-ROM and the floppy disk that contains your network settings from your computer.

Keep both items handy for setting up the Wireless USB Adapter or Notebook Adapter on your second computer.

Proceed to step 4 to begin setting up your adapter.

# 4 | install.

## Setup Software | Second Computer

Now that you have finished setting up the base station, take the Setup CD-ROM to your second computer.

**To install the software**, insert the Setup CD-ROM into the CD-ROM drive. If the Setup Wizard does not start automatically after a few

seconds, open **My Computer**, double-click the CD-ROM icon, and then double-click **Setup** or **Setup.exe**.

### *In the Setup Wizard...*

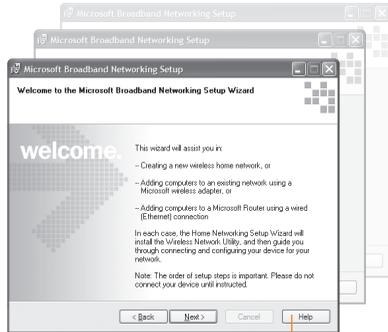

Follow the steps in the Setup Wizard to install the software and set up the adapter on your second computer.

When the wizard asks which device you are setting up, select the adapter.

When the wizard asks if you have a base station (gateway or router) in your network, select the Microsoft Base Station.

When the wizard asks for your network settings, use the floppy disk that you saved your settings on in step 3.

Continue following the instructions in the Setup Wizard. When the wizard asks you to connect the adapter, proceed to step 5 on the next page of this guide.

Click **Help**.

# 5 | connect.

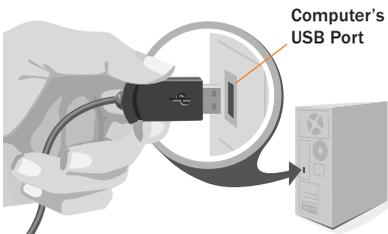

## Wireless Adapter | Second Computer

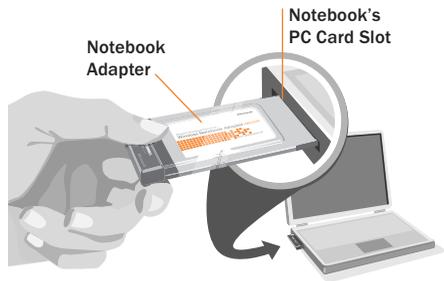

When the Setup Wizard asks you to connect the adapter, do one of the following:

- **If you have a USB adapter,** connect the adapter cable to an available, high-powered USB port on your computer.
- **If you have a notebook adapter,** turn off your notebook, and then insert the adapter into the PC Card (PCMCIA) slot.

Note that USB ports on keyboards and monitors typically are not high powered.

## Internet Connection

**Perform this simple test** to confirm that your network is working properly. Try accessing the Internet by opening your Web browser and visiting a Web site such as [www.microsoft.com](http://www.microsoft.com). If your network is working properly, you will be able to access the Internet from both computers you just set up.

### Troubleshooting

The following resources can help you solve problems with your base station or network:

- The ***User's Guide*** contains basic troubleshooting instructions and technical support information.
- The **Broadband Network Utility** provides comprehensive Help and troubleshooting. See the next page for more information on the Broadband Network Utility.
- Our **Web site** at [www.microsoft.com/broadbandnetworking/](http://www.microsoft.com/broadbandnetworking/) includes the most recent troubleshooting information and software updates.

# → | what's next?

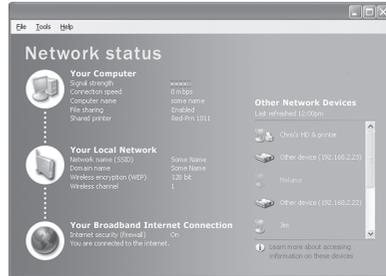

Now that you have set up the Microsoft Broadband Networking Wireless Kit, you are ready to begin using your network.

- **Use the Broadband Network Utility** to modify network settings or monitor your network status.

For detailed information about using the Broadband Network Utility, see Chapter 5 of the *User's Guide*.

- **Make files and printers accessible** to other computers on your network or play multiplayer games. For more information, see Chapter 4 of the *User's Guide*.
- **Expand your network** by connecting additional wireless and wired devices. You can connect up to 200 wireless and four Ethernet devices to your base station, including Microsoft Xbox™ video game systems.

By adding a hub or switch, you can connect even more devices. For more information, see “Adding to Your Network” in Chapter 3 of the *User's Guide*.

**TIP** To access the *Broadband Network Utility*, double-click this icon in the Windows taskbar.
